Classification des maladies visibles sur les feuilles de manioc Métrique : Accuracy 1

Les données

Description

Traitements

Description des données fournis

- 20 000 images
- Tailles diverses
- 5 labels numérotés de 0 à 4
- Images et labels dans un csv ou tfrecords

0 CBB	1087
1 CBSD	2189
2 CGM	2386
3 CMD	13157
4 Healthy	2577

Importer ces données

TFrecords

Avantages d'être plus rapide à importer et à traiter.

Déjà convertie en clés/valeurs.

Des difficultés à en créer des personnalisés

Images bruts

On fait nous même la liaison entre le csv et les images dans le dossier.

On a pleinement le contrôle sur les images.

Plus long à traiter

Augmenter les données

Enrichir son dataset:

- Rotation
- Déformation
- Zoom
- Symétrie

Utilisation de tensorflow avec ImageDataGenerator

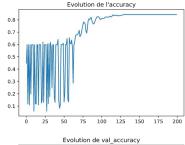

Resize des images pour s'adapter aux contraintes matérielles.

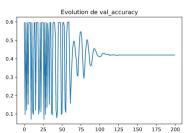

-> 128x128 + couleurs car maladies parfois de même forme
